\*Scope 1 and Scope 2 are calculated using emission factors in line with the Act on Promotion of Global Warming Countermeasures and other methods, based on the amount of energy used (whether actual figures or estimates) in the relevant fiscal year. Until fiscal year 2021, for the electrical emission factors, a basic emission factors was used, but for fiscal year 2022 onward, calculations have been made more precise, such as through the use of a post-adjustment emission factors. Some figures for fiscal year 2020 and before are estimates calculated by considering a base unit (of floor area) for each business division.

\*Scope 3-1 is calculated from the sales cost price part in the relevant fiscal year and services provided part of real estate for sale that was sold in that fiscal year.

The sales cost price part of real estate for sale that was sold in the relevant fiscal year (excl. land) is calculated by multiplying figures given in the emissions unit value database, which details Ministry of the Environment emission factors used to estimate an organization's greenhouse gas or other emissions through its supply chain.

The services provided part during the relevant fiscal year is calculated by multiplying accounts that exceeded 1% of the total monetary amount covered in Scope 3-1 by an emission factors determined by the Ministry of the Environment.

\*Scope3-2 is calculated by multiplying the amount of increase in Property, plant and equipment excluding land and construction in progress by an emission factors determined by the Ministry of the Environment.

\*Scope 3-3 is calculated by multiplying the amount of energy totaled in Scope 1 and Scope 2 by an emission factors determined by the Ministry of the Environment.

\*Scope 3-5 is calculated by multiplying emissions produced by general and industrial waste (estimated figures are partly included) by an emission factors determined by the Ministry of the Environment.

\*Scope 3-6 is calculated by multiplying the number of employees of the Mitsui Fudosan Group by an emission factors determined by the Ministry of the Environment.

\*Scope 3-7 is calculated by multiplying the number of employees of the Mitsui Fudosan Group by the number of working days for Mitsui Fudosan and an emission factors determined by the Ministry of the Environment.

\*Scope 3-11 is calculated by multiplying the area, etc., real estate sold in the relevant fiscal year by the annual emissions unit value and the remaining service life.

\*Scope 3-12 is calculated by multiplying the area of real estate sold in the relevant fiscal year by an emission factors determined by the Ministry of the Environment.

\*Scope 3-13 is calculated using emission factors and other methods in line with the Act on Promotion of Global Warming Countermeasures, based on the amount of energy used (whether actual figures or estimates) in the relevant fiscal year. Some figures are estimates calculated by considering a base unit (of floor area) for each business division.\*Scope 3-6 is calculated by multiplying the number of employees of the Mitsui Fudosan Group by an emissions coefficient determined by the Ministry of the Environment.

\*1 Since fiscal year 2020, we have improved the accuracy of reporting data received from each facility relating to usage of purchased clean and industrial water.

\*2 Since fiscal year 2020, we have reviewed water usage categories and added some usage categories to the overall totals.

\*3 Water recycling rate: For the fiscal year 2019, percentages show the proportion of grey water in total water intake (1,016 thousand m<sup>3</sup>). From the fiscal year 2020, the percentage shows the proportion of water (FY2020: 495 thousand m<sup>3</sup>; FY 2021: 1,121 thousand m<sup>3</sup>; FY2022: 1,059 m<sup>3</sup>) reused after being put in grey water containers after its initial use.

\*4 Amount of wastewater transported to a water treatment plant via underground sewers. Wastewater put into the sea, the ground, underground, or elsewhere is not included in this total.

#### Notes:

1. Calculated based on the regulations in the Act on the Promotion of Women's Active Engagement in Professional Life (Act No. 64, 2015).

2. Calculated based on the number of male employees whose partner gave birth in the relevant fiscal year, and the number of male employees who used the leave system to take time off work during that fiscal year at the time of their child's birth, as childcare leave, or other time off for the purpose of spending time with their child.

Where there are male employees who take childcare leave, etc. in a different fiscal year from that of their child's birth, this rate may exceed 100%.
 Pay is determined irrespective of gender, and is the same for the same role or qualifications. We have an equal salary system in place, but a pay gap has arisen due to the difference in personnel in terms of roles and employment types between male and female employees.

5. On April 1, 2023, due to a merger whereby Mitsui Home Co., Ltd. continued and Mitsui Home Components Co., Ltd. was disbanded, these figures are for March 31, 2023.
