

## 6. Responding to the New Normal

### Measures to Prevent Infection through Touch (Non-contact)

<Measures to prevent infection through touch>

- Promote automation of plumbing, such as in restrooms for both customers and staff, and reduction and automation of doors
- Install non-contact buttons in elevators to make them touch-free

### Ticketless parking lots

This facility will introduce a ticketless parking lot system. A car authentication camera system at entrance and exit gates will be employed and tickets will not be needed when entering or exiting parking lots. Reducing time required to enter or exit parking lots will ease customer stress and help alleviate traffic congestion.
